

# Printing from a Smart Phone

## How to access HFC's Cloud-Based Printing

With HFC's cloud-based printing system, you can send print jobs from any device that has internet access, from anywhere in the world. This guide will focus on printing from a smart phone. Let's learn how.

### Step One:

Open your smart phone, or any online device, navigate to PrintMe.com, and click Get Started.

### Step Two:

Then click Upload Files.

### Step Three:

Select Take Photo, Photo Library, or Browse.

If you choose to browse your device, locate and click once on the necessary file.

### Step Four:

Enter an email address if you would like a copy of the code sent to your email or you would like to share this print job with another person. Click Send.

### Step Five:

You will be asked if you would like to share your location. Click Allow if you would like to see a map of local printer locations. Otherwise, you may click Don't Allow.

### Step Six:

The code for this print job is displayed, along with a map of local print stations where you may pick up your print job. Keep in mind, that this code will work at any EFI print station in the world, not only locally. This is ideal if you have shared the code. (This code will be valid for 24 hours.)

Note that to release the print job, the provided print code will need to be entered into an EFI print station. See the Guide to Printing at HFC.
